

Product information

G Data **AntiVirus** 2011

Simple. Secure. Resource saving.

G Data best-in-test protection without any loss of computing power. Use of self-learning fingerprinting and whitelisting mean increased scan speeds and reduced memory requirements. Improved proactive detection of unknown viruses through use of optimised behaviour blocking and significant data reduction during installation and update routines through use of revised cloud computing. G Data AntiVirus once again sets the highest security benchmarks in virus, spyware and phishing protection.

Maximum security from the record test winner:

- Constant optimum virus detection
- For many years the quickest response time to new viruses
- The latest methods for detecting unknown viruses (behaviour blocking, heuristics, cloud security)

Simple user guidance - ideal for beginners:

- With new "one click" user interfaces - everything at a glance
- Automatically carries out all protection functions undetected in the background

Includes a year's licence inclusive of hourly virus updates, new software updates and version upgrades. With 24h/365 day service hotline.
